

Bogdan Kachatov

Senior Product Designer

[Portfolio website](#)

Shipped 10+ digital products from zero to launch, including a **staking platform** that attracted **\$500K+** in assets and a crypto wallet processing **1M+ transactions**. I specialize in taking complex **B2B** and **B2C** products through the full design lifecycle in **Web3** and enterprise domains. Strong at working autonomously and making product decisions within established systems, while collaborating closely with PMs, developers, analysts, and stakeholders to align on product vision and ship validated solutions.

Employment history

Senior Product Designer | Cellframe

2022 - 2025 · Web3 / VPN / Enterprise tools · Remote

Cellframe builds Layer-0 blockchain infrastructure. I owned the full design lifecycle for products across the ecosystem, from early research through launch and post-release iteration.

Key achievements

- Led end-to-end design of a fixed-term staking platform from discovery to launch, conducting user research and iterating on interaction design. **Attracted \$500K+ in staked tokens**. Post-launch usability testing and A/B iteration increased auto-compound adoption by **44%**.
- Owned the full product design cycle for a multi-chain crypto wallet (desktop + mobile): wallet creation, token swaps, transaction history, built-in DEX, and node management with commission tracking. Defined information architecture and user flows through prototyping and cross-functional collaboration with engineers. The wallet **processed 1M+ transactions**.
- Drove product iterations for KelVPN app through user interviews, hypothesis validation, and usability testing. Designed trial-to-purchase flow that **increased free-to-paid conversion by 18%**. Simplified the hybrid VPN feature through iterations, **increasing feature usage by 27%**.
- Designed a B2B admin panel for enterprise VPN license management across multiple corporate clients. Built interfaces for bulk key provisioning, expiration tracking with proactive alerts for timely sales outreach, invoice generation, and a company overview dashboard. Also designed a limited client-facing portal for customers to monitor their active keys and expiration dates. **Reduced key management time by ~60%**.
- Designed a router admin panel from scratch. **Reorganized a complex networking product into clearer flows**, with Basic and Advanced modes for different levels of control. Since router panels lack built-in analytics, validated through corridor testing with non-technical employees — measured task completion time for common scenarios (Wi-Fi password change, device removal, reboot), iterated based on feedback.

Full-time, Remote

Skills

Design expertise

End-to-end product design | Interaction design | Information architecture | Design systems | Platform guidelines (HIG, Material design)

Discovery & research

User interviews | Usability testing | CJM | JTBD | Hypothesis validation | A/B testing | Data-driven design

AI powered workflow

LLM-assisted research | Production-grade functional prototypes | Figma MCP

Stack

Figma | Jitter (Certified Expert) | Claude code | Codex | Pencil | Midjourney

Collaboration & Strategy

Cross-functional work with PMs, Engineers, Analysts, Stakeholders | Product decisions grounded in unit economics and theory-of-constraints thinking

Languages

English: Professional working

Russian: Native

- Created a gamified employee motivation system (points, peer recognition, leaderboards) for 3 user roles. Ran corridor usability testing with colleagues across 4 major iterations, achieving company-wide adoption. Average monthly task completion increased by 17% within the first quarter of launch.
- Built and scaled a unified design system across all products, reducing design-to-dev handoff friction and ensuring consistency at scale.
- Led end-to-end design of DeFi voting, blockchain explorer, token presale and cross-chain bridge.

Product Designer | Contract projects

2019 - 2021 · Independent practice

- Designed a B2B procurement platform: buyer dashboard, tender creation, bid management, and supplier matching. Redesigned application and tender creation forms, increasing form completion rate by 31% through simplified user flows.
- Delivered 10+ landing pages for startups, collaborating with founders on positioning and acquisition strategy. Conducted competitive analysis and user research to inform layout, hierarchy, and messaging decisions.

Product Designer | Contract projects

2025 - Current · Independent practice

- Designed a corporate messenger with built-in video conferencing powered by decentralized fog-computing infrastructure. Full product cycle from research to interface for messaging, calls, and distributed node management (contract, NDA).
- Delivered animated app walkthroughs and interactive product demos for multiple clients, helping teams present complex app flows on marketing websites.
- Conducted UX audits for client products, identifying friction points and delivering actionable redesign recommendations.
